

## Hegewald & Peschke GmbH certified for the calibration of hardness testers

- ✓ *Hegewald & Peschke GmbH receives a DKD certificate for the calibration of material testing machines for hardness*
- ✓ *From now on, the company can calibrate the entire range of hardness and universal material testing machines*

**Nossen, February 4th, 2010** – The Hegewald & Peschke Meß- und Prüftechnik GmbH has been certified for the measurand hardness together with the Franz Wohl GmbH in Schalkau by the Deutscher Kalibrierdienst (DKD – German calibration service). Now, the materials and hardness testing specialist is one of the few companies that are allowed to calibrate hardness testers and issue DKD calibration certificates. Those certificates are becoming more and more popular among customers because they affirm the reliability of measured values and strengthen confidence in the calibrated testing machines.

### The new service offer: calibration of hardness testers

With the successful accreditation, the Hegewald & Peschke GmbH was able to expand its range of calibration services in the field of mechanic technological tests. In order to fulfil the high demands of the DKD, it was necessary to invest in new measuring equipment and in further training of the company's staff. Moreover, additional staff will be employed which is especially qualified for this sector. This ensures the keeping of the high quality standards for Hegewald & Peschke's services, also for the calibration of hardness testers.

### Calibration for the safety of measuring results

The Hegewald & Peschke GmbH has been offering calibration services for the measurands length and load since 1999. Together with the company Franz Wohl & Partner from Schalkau in Thuringia, Hegewald und Pechke runs a calibration laboratory for this purpose. The lab is licensed by the accreditation body of the DKD and checked regularly. It is especially equipped for the calibration of the specified measurands and measuring ranges. Thus, it is possible to prove that the calibrated machines accord to the standards DIN EN ISO 9000 and DIN EN ISO/IEC 17025.

About Hegewald & Peschke Meß- und Prueftechnik GmbH

The measuring and testing technology specialists are based in Nossen, near Dresden. Since 1990, the company has been developing, manufacturing and selling high-quality machines, components and software solutions for testing raw materials, constructional elements and components. These include universal testing machines, hardness testing machines, test stands for furniture and constructional elements, as well as various length measurement devices for industry and research. The company, with 50 employees and various sales offices throughout Germany, also provides various measuring and testing services and retrofitting for universal testing machines. The design and software development divisions at Hegewald & Peschke maintain close cooperation with universities and research institutes (such as Fraunhofer) in order to ensure that the company's products remain at the cutting-edge of technology. Hegewald & Peschke is certified under ISO 9001 and has its own DKD calibration laboratory. **For further information about Hegewald & Peschke Meß- und Prueftechnik GmbH, please refer to the website [www.hegewald-peschke.com](http://www.hegewald-peschke.com).**
